This 1-day class is a great follow-up for those that have attended the “*The Art of Reading Smoke.*”

The class provides focus for fire officers that are tasked with rapid assessment as a first-arriving decision-maker at incidents. It has been said: “So goes first-due, so goes the incident.” Our incidents are changing in scope, impact, and complexity – and so must our ability to rapidly survey and decide the right course of action when first arriving.

This is not your TYPICAL size-up Class!

1. Improving Your Rapid Decision-Making

- Reading Buildings
- Reading Smoke (a brief review)
- Reading Risk (Capturing the “environment”)

2. The First-Due Decision Model

- Inventory the Known
- Define the Risk
- Declare a Risk/Ops Mode

3. Scenario Practice
