# Table Top Command

This program uses table top simulation to perfect the participants fireground command skills and assign resources using ACT objectives. The table top simulator is divided into residential, commercial and industrial fires. It also works toward multiple rescues and incident within an incident. The tables are also used for Hazardous Materials and Multi-Casualty Incidents.

The session objectives are to increase the slide carousels that we use for decision making, have a better understanding of risk vs gain concepts and to prepare students to take command of an incident and assign resources.

The next course will be during our Grand Opening 9/9 – 9/12
